

>> saves water, energy and money - GUARANTEED!

Do your faucets ever leak? Do you hear a constant drip of water? If you are tired of watching your money literally go down the drain, we got a solution for you - Nautilus® Valve.

Old dripping valves not only waste precious water and your money, they also damage your very expensive fixtures. Constant wear and tear take their toll, and you keep on replacing those fixtures when all you have to do is get Nautilus® valves instead!

Nautilus® solves the problem of rubber on metal friction which is the main cause of valve failure that needs expensive plumber's visit. Instead, parts made of self-lubricating polymer resins designed for frequent usage are used in the construction of Nautilus®. It takes on all the punishing work of the opening and closing of water numerous times each day. Since sealing element rests on the seat (internal sealing cylinder does actual work of stopping or opening of water flow) it can extend the usable life of the fixtures indefinitely.

Designed from the ground up to eliminate all the shortcomings of the current valves. Fifth generation design with a decade of improvements behind it. It has been manufactured to easily withstand 250,000 cycles which are equivalent to 15 years of service.

You can use Nautilus® valves in kitchen, bathroom, and shower faucets. It can also be used in instant water heaters and shutoff valves of any kind. Already used by thousands of schools, universities, hospitals, apartment complexes, hotels, restaurants, parks, airports, military installations, commercial buildings, etc.

Space-age thermoplastic material is virtually indestructible. Absolutely maintenance-free design is resists corrosion, lime, and scale buildup.

We offer two versions of Nautilus® valves, see which one is right for you. Both have the same mechanism that will provide many years of trouble-free use.

>> Nautilus® 5 - D.I.Y. self-adjusting

Specially engineered patent-pending **Depth Adapting Ring™** readily adapts depth of a chamber to anywhere from 22-28mm. Simple twist of the extends or reduces depth so you can install it in accordance with each faucet manufacturers' specification.

Innovative simplicity that works! No expensive proprietary valves from the faucet manufacturers.

>> Nautilus® SL - Pro with extension rings

Economy version suited for professionals who sometimes need to fix the seat of the valve with our special tool because of the water damage. **Extension rings** fit standard depths listed above in 2 mm increments starting from 22mm.

Perfect solution for new faucets as well as retrofitted ones.

>> Advantages:

- Saves water, energy, and other natural resources
- Patented, proven 5th generation valve
- Lasts longer than ceramic valves
- Saves Money - Reported water savings of up to 60%
- Longer lasting valve seat (made of self-lubricating polyester elastomer)
- Eliminates damage to rubber washers, valve shaft, shell tear, and wear
- Over 30 million valves in use in 15 countries worldwide
- Functions fine on all continents, in variety of climates
- Nautilus® valve can never be over-tightened!
- Fast and easy installation - just like conventional valves
- Award winning design - Brussels "Eureka" 1994
- For both new and old faucets (taps) and similar fixtures
- Long life - in tests withstands over 250,000 open/close cycles

>> Technical Specifications*:

- Pressures up to 15 bars (217 psi)
- Temperatures up to 90°C (194°F)
